Abdulahman Asiri

Riyadh, Saudi Arabia

PROFESSIONAL SUMMARY

Technical Operations and Application Support Specialist with 5+ years of experience in technical support, application support, issue investigation, and support documentation. Strong background in Knowledge Management Engineering, technical communication, MkDocs-based documentation, and support workflow improvement. Experienced in transforming technical complexity into structured knowledge resources, defect reports, reusable support content, and practical documentation systems that improve support efficiency, reduce recurring inquiries, and enhance end-user autonomy.

CORE COMPETENCIES

- Technical Operations & Support
- Professional Stakeholder Communication
- Cross-Functional Coordination
- Service Quality & Support Workflow Improvement

PROFESSIONAL EXPERIENCE

Enseyab Information Technology

Oct 2024 - Present

Application Support Specialist

Government Systems Support & Knowledge Management Engineering & Technical Documentation

- Support business users on government-sector systems by analyzing issues, documenting cases, and coordinating with technical teams to support timely resolution.
- Prepare clear support and operational documentation that helps users understand workflows, system navigation, and core operational procedures.
- Perform functional testing by validating user scenarios, logging defects, and preparing detailed reports that show the difference between expected and actual behavior.
- Support technical investigation by reviewing API requests and responses in Postman when needed.
- Improve the user experience by identifying recurring inquiries and enhancing documentation to reduce repeated tickets.

T Sport

Nov 2022 - May 2023

Customer Service Specialist

Mobile App Support & Technical Issue Reporting & User Experience Improvement

- Supported mobile app users with account, booking, and offer-related issues, providing clear and accurate guidance.
- Analyzed recurring tickets and documented patterns to support the technical team in investigating root causes.
- Prepared clear issue reports covering user steps, expected result, and actual result to support faster resolution.
- Improved the user experience by simplifying procedures and clarifying usage steps, helping reduce repeated tickets.
- Coordinated with the technical team to support efficient issue resolution and maintain service quality for users.

Sep 2022 - Nov 2022

Customer Service Representative

CRM Case Management & High-Volume Support & Professional Communication

- Handled and tracked end-to-end CRM case lifecycles, maintaining accurate case data and procedural consistency in a high-volume operations environment.
- Guided customers step by step to understand their issues, clarify required actions, and close cases clearly and completely.
- Maintained structured CRM case notes and follow-up records, supporting efficient case tracking and professional resolution.
- Maintained service quality under high case volume by writing clear and accurate notes that supported follow-up and resolution.
- Built practical experience in CRM workflows, case handling, customer communication, and professional support operations.

qTech - Alqemam

Sep 2018 - Sep 2021

Technical Support Engineer

Workplace IT Support & User Access Management & Endpoint and Device Support

- Endpoint Support & Configuration: Deployed, configured, and maintained end-user computing environments, including operating systems, software, hardware, workstations, and printers, to support workplace stability and consistent performance.
- Access & Permissions Management: Managed user access requests and permission configurations under approved support procedures, supporting secure workflows, biometric enrollment, and access-related issue resolution.
- Operational Incident Management: Served as a primary point of contact for hardware, software, workstation, printer, and access-related issues, investigating root causes and resolving common incidents to minimize user downtime.
- Technical Liaison & User Enablement: Acted as a technical support interface for business users, translating technical issues into clear guidance, documenting recurring problems, and escalating complex cases with complete context.
